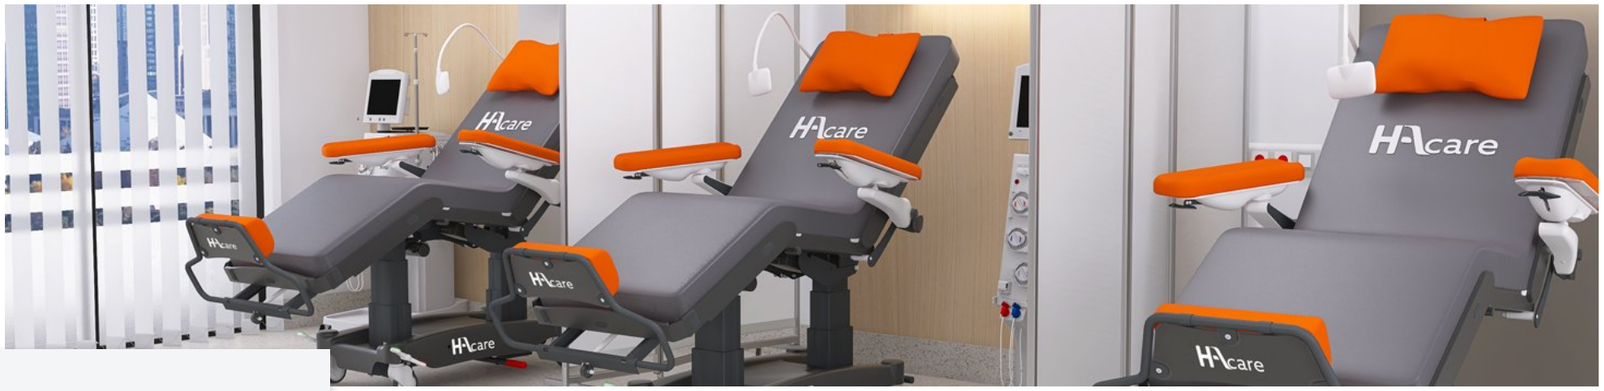
HAcare, specialist in medical devices since 1860.

At HAcare, we design, manufacture and distribute medical devices and innovative, durable medical furniture solutions designed to improve the daily lives of patients and healthcare professionals alike.



The HAcare Group's eco-responsible commitments

The HAcare group commits to an **eco-responsible industrial orientation**

In its sustainable development strategy, the HAcare group has defined a list of **6 commitments** that guide its **actions and decisions** since the group's creation and for the years to come.

Indicators have been set up for each commitment.

Our 6 commitments

- Made in France production
- The use of renewable resources
- Integrating the circular economy into all new product developments
- Responsible purchasing (supplier quality monitoring)
- Daily actions to respect and protect the environment
- Combating RSI and noise pollution through our products

Choose the circular economy

HAcare finished products can be recycled through a recovery circuit at the end customer's premises, for recycling with our partner supplier. As wood cannot be recycled ad infinitum because its fibers become too small or exhausted, wood waste is recovered and transformed into green energy.

The plant fiber boards used in the manufacture of HAcare products are 100% reclaimed wood. Each HAcare finished product bears an index revealing the proportion of plant fiber contained.

Recycling is the practice of recovering used materials from the waste stream, then incorporating these same materials into the manufacturing process. Each HAcare finished product carries an index revealing the proportion of recycled material it contains.

Recyclable materials

HAcare finished products are 95% recyclable. For example, the HAcare medical bed is entirely recyclable, except for the wheels and motors. Each bed can be dismantled to recover each material separately: plant fiber, metal, plastic.

PLANT FIBER

Recycled wood

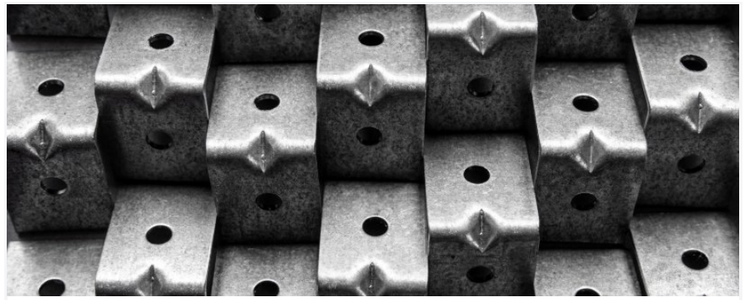
The plant fiber boards used in the manufacture of HAcare Group products are:

100% reused wood

Reuse is one of the environmentally friendly processes. It involves, for example, leftovers from wood-processing companies (e.g. sawmill scraps, production offcuts...). But also by-products from activities such as sustainable forest management and slope maintenance.

100% FSC-certified wood

Recyclable with a partner supplier who, on a worldwide exclusive basis and since 2021, recycles MDF and HDF panels.No water consumption, nor green energy **biomass**.



The metal

All metal components are **recyclable** and reusable, **infinitely**. Once the metal has been sorted, it is compressed, crushed, rolled and melted. It is then remolded into coils, bars or wire for reuse. This process can be endless!

Metal recycling has **many advantages**. It conserves natural resources by reducing the need for virgin materials, cuts energy consumption and reduces **greenhouse gas emissions**.

Recycled plastic

At recycling plants, waste (re) becomes a **raw material** through various processes: grinding, micronization, regeneration of plastics.

The recycled plastic will then be resold to **plasturgy** manufacturers in the form of **flakes**, powder or even **granules**.

CHEMODIALYSIS CHAIR-BEDS HOSPITAL

Dialysis

Armrests - Comfort mattress - AMB7 FCD ERGOLYS

OUR EXCLUSIVES

OUR EXCLUSIVES

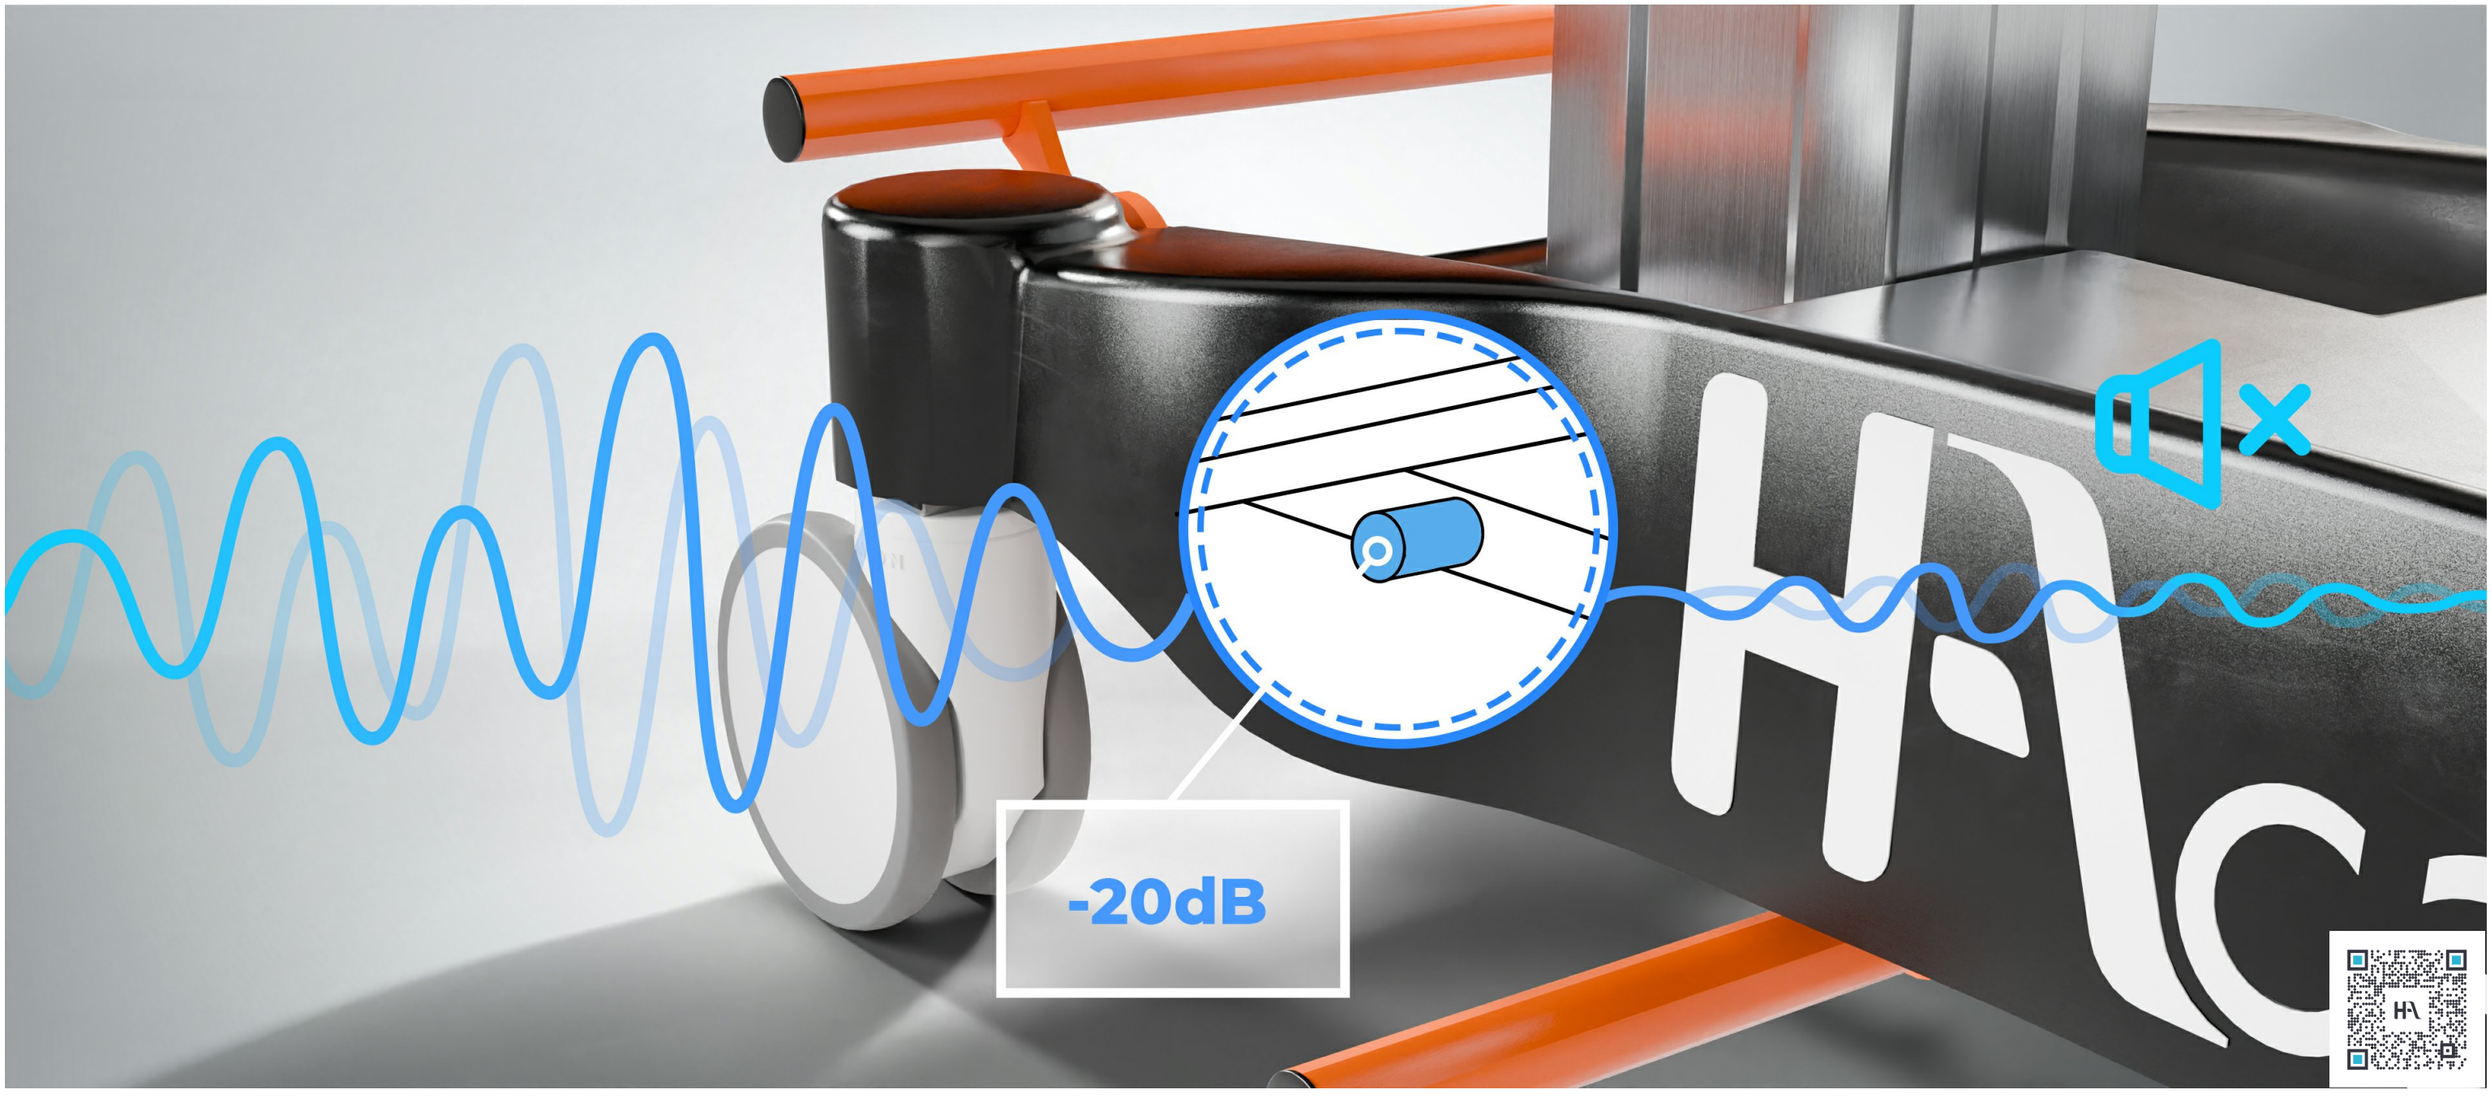
Soft Sound

Over the past 40 years, the average noise level in hospitals has increased by 15 decibels (dB), reaching levels of around 70 dB, well above the WHO recommended limit of 35 dB for a healthcare environment.HAcare products are designed to combat noise nuisance.The goal is to reduce by 20dB with the addition of dampers on all rolling and stretcherable structures

SOFT SOUND®

Fighting noise pollution

Anti-vibration support, **high-performance damper**: for **smooth**, **quiet** and **comfortable** stretching, even when crossing thresholds or exiting elevators.**Noise pollution is significantly reduced**



OUR EXCLUSIVES

Easy MOV

In a hospital environment where every gesture counts, protecting the health of caregivers while guaranteeing patient safety is essential. Stretcher carrying, an activity with a high risk of RSI due to repeated efforts and awkward postures, requires adapted solutions. Designed to reduce drudgery and optimize movement, our medical devices become genuine everyday allies, improving comfort, ergonomics and quality of life at work.

Fighting MSDs

Ergonomic handles, double-roller wheels and **5th directional and synchronized wheel** for optimal **maneuverability**. Designed to limit RSI and adapt to all morphologies.

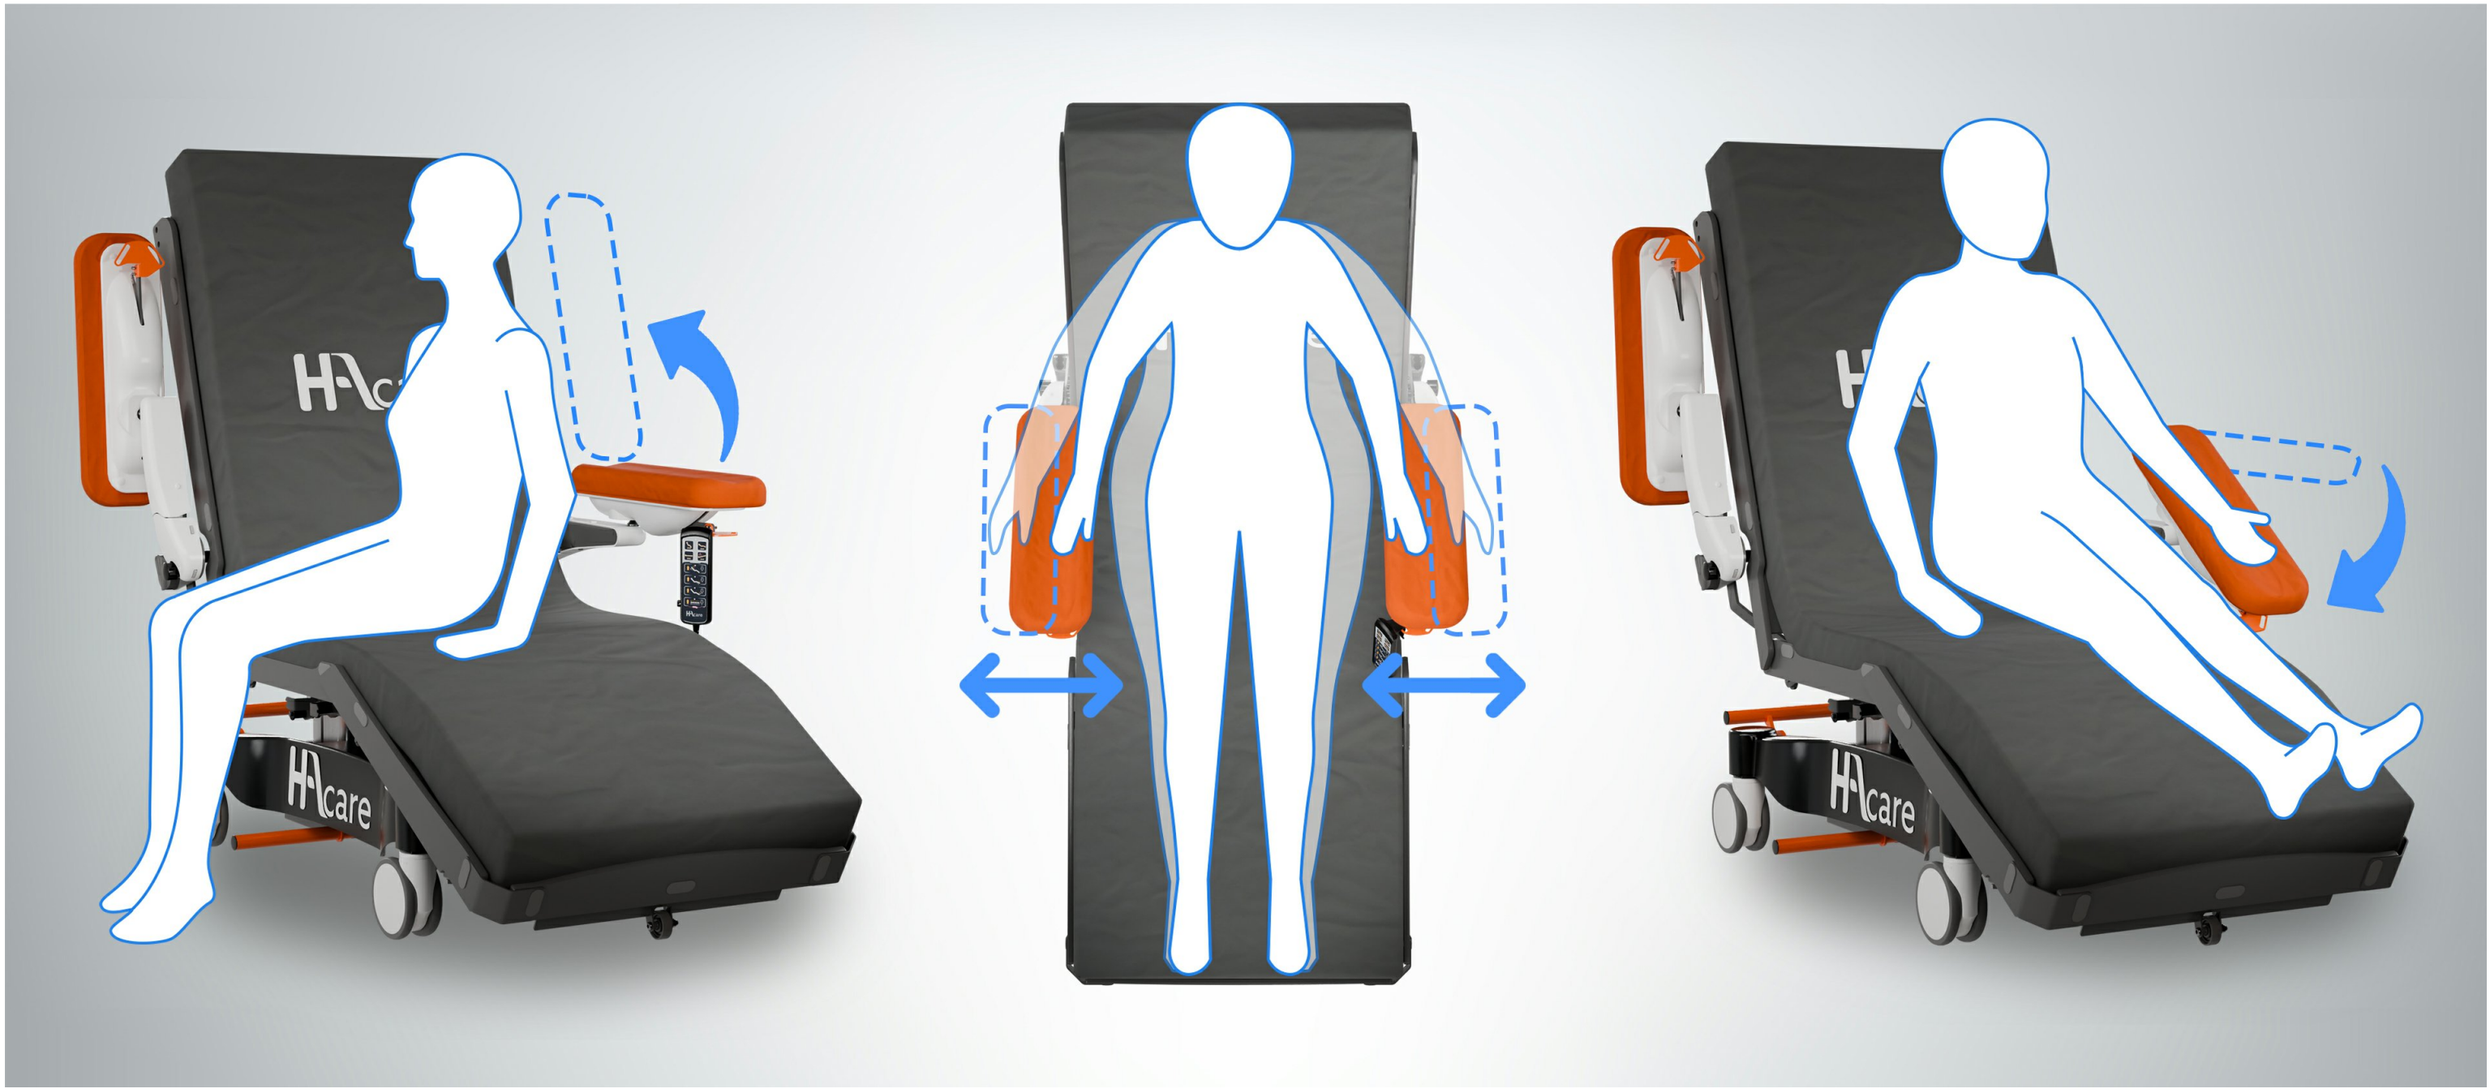
OUR EXCLUSIVES

Body Flex armrests

In dialysis or chemotherapy departments, patient comfort and safety are essential, as sessions are long and require partial immobility. Armrests must offer stable support, adapted to all morphologies, while simplifying vascular access. Ergonomics are also crucial to reduce the effort required of nursing staff, and to make care flow more smoothly. Ultra-comfortable, adjustable and inclusive devices must meet these requirements to improve patient experience and day-to-day efficiency.

Ultra-comfortable armrests for picking or care

Designed to adjust to all body types, the **Body Flex armrests** are **multi-directiona**l, **orientable** and **translatable** by 7.5 cm for optimal arm positioning.



OUR EXCLUSIVES

Zero gravity position

On wards where patients have to lie for long hours, such as in long-term hospitalization or chronic care, posture plays a key role in comfort and pain prevention. Intuitive, quick and easy to use controls allow access to a "zero gravity" position that distributes pressure, promotes relaxation and improves circulation. This setting optimizes both patient well-being and caregiver efficiency.

Ultra-comfort in a single gesture

Thanks to the **"Zero gravity position"**, **recognized** for its ability to **distribute body pressure harmoniously**, the patient's weight is distributed evenly over the entire mattress. This posture **effectively reduces pressure points** and provides a pleasant sensation of lightness and well-being.
Optimized comfort, **relieved tension**, **favored circulation**.
Two positions accessible **in a single gesture** (a single control) for **comfort** and **ultra-comfort "Zero gravity"**.
.

HIGHLIGHTS

HIGHLIGHTS

Long-lasting comfort and optimal ergonomics (Lying surface)

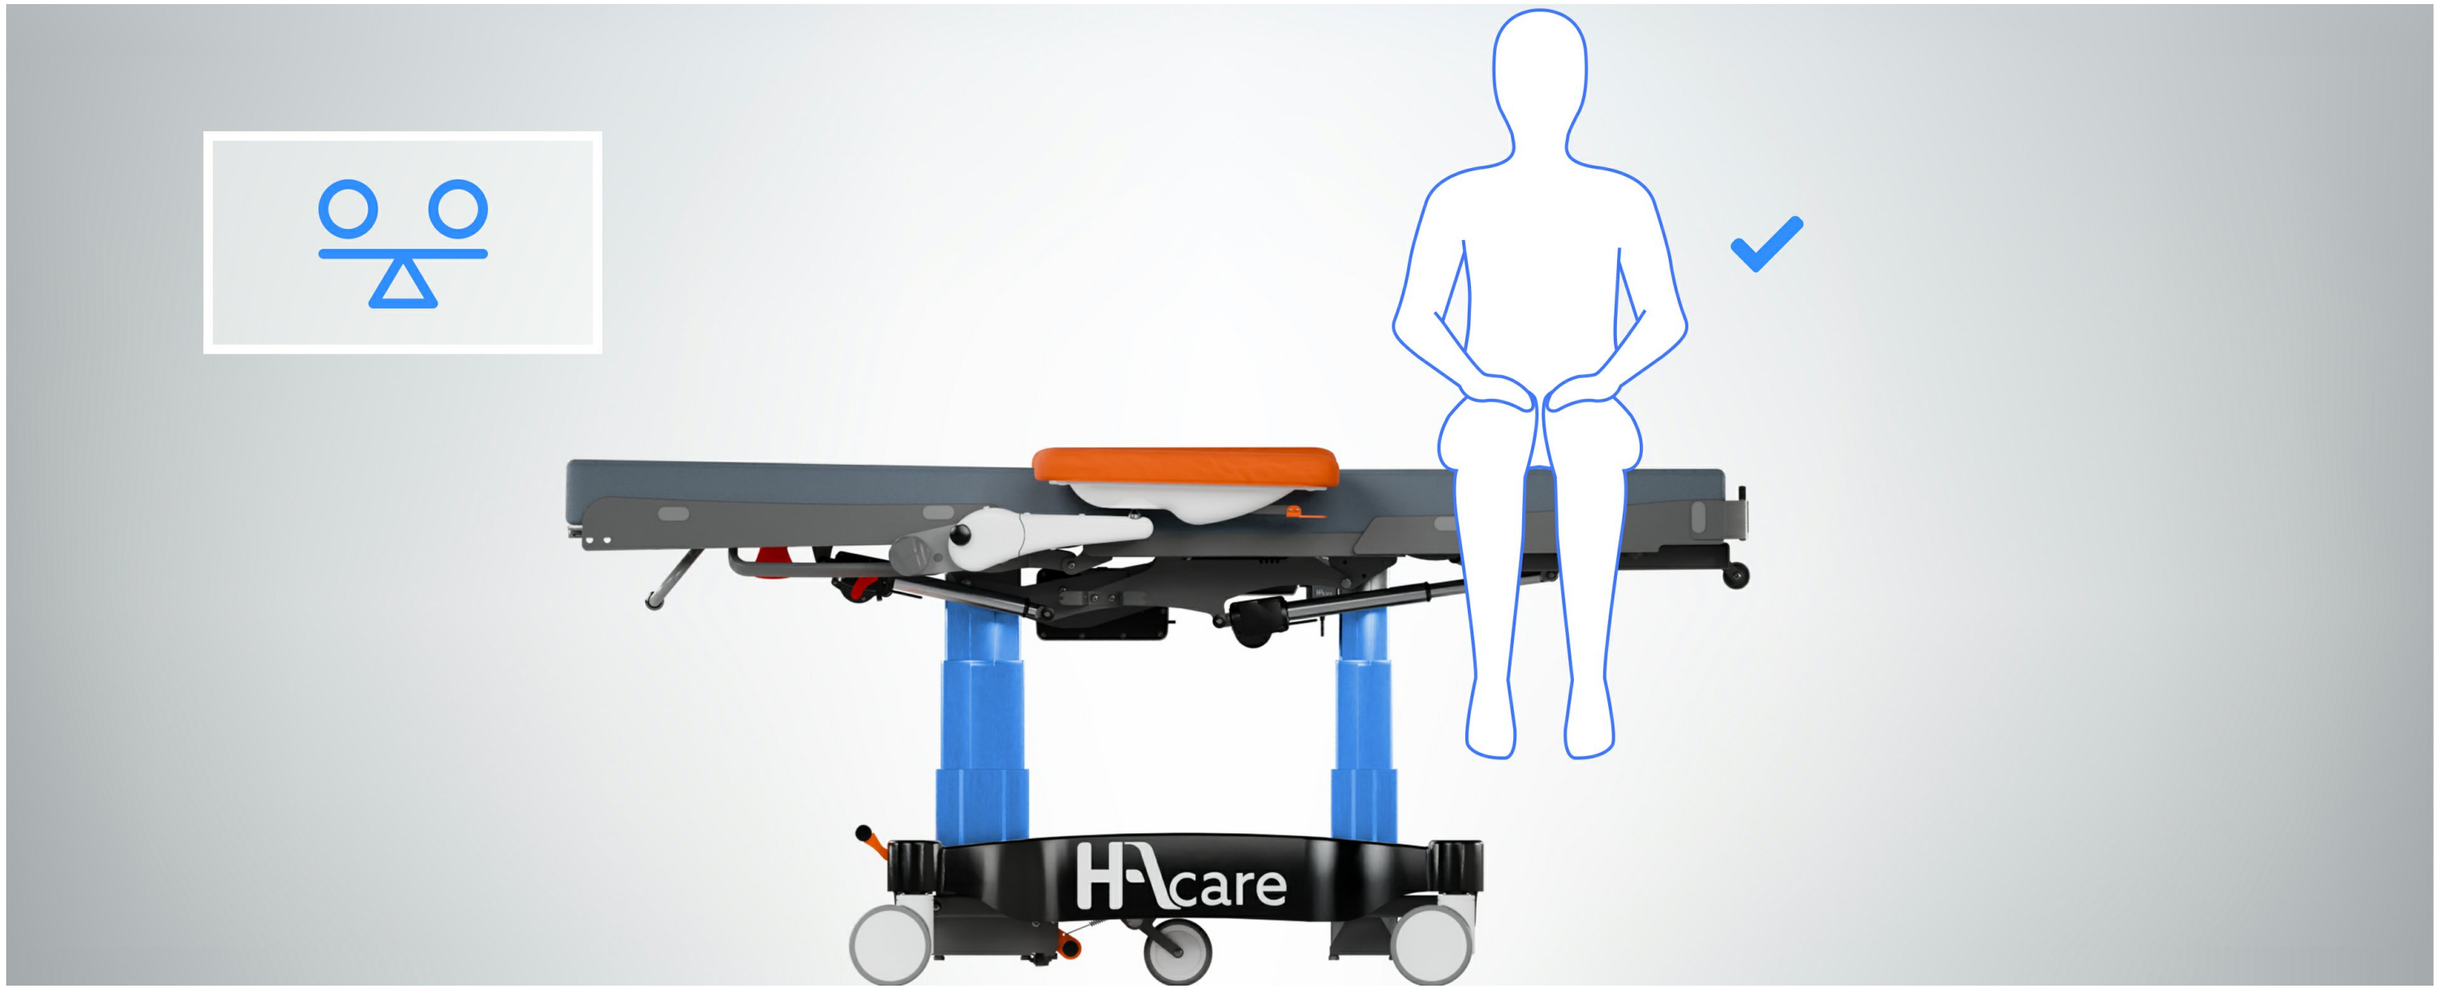
Designed for extended care, dialysis, this chair offers **Ultra-comfort** thanks to a **three-layer mattress** made of viscoelastic foam, guaranteeing excellent support and perfect pressure point distribution. Its generous width of 73 cm and length of 220 cm ensure freedom of movement and a comfortable lying position, even for taller patients

The **integrated mattress wedges** maintain the patient's position securely, without compromising comfort. The**ultra-wide BodyFlex armrests** adapt to the patient's movements while providing stable, flexible support.

For maximum **ergonomics** on both the caregiver's and patient's side, **the control satellite** can be positioned **right or left** without tools, depending on session habits or constraints.

HIGHLIGHTS

Double columns and high stability (Elevation system)



Thanks to its **two-column** design, the ERGOLYS chair offers unrivalled **stability**. Its sturdiness eliminates any risk of unwanted movement and guarantees optimum safety during care. **For patients**, this stability is a guarantee of confidence: they can sit on the leg rest without fear of tipping over, making it easier to settle in and **reducing stress**. **For care teams**, it's the guarantee of **reliable equipment**, designed to last and to accompany every gesture with complete peace of mind.

Customized coatings (Configurable)

Because every detail counts in the care experience, a **wide choice of colors** and decors allows you to create **harmonious**, warm and **easily identifiable** spaces, particularly suited to outpatient departments. Head cushions, footrest cushions or armrests can be declined to **integrate with your environment**. A solution that combines comfort, aesthetics and visual identity at the service of both patient and caregiver.

Optimizing the care surface (Easy Clip)

EASY CLIP

With the **EasyClip®** concept, gain in efficiency and work comfort. This **intuitive**, **tool-free** and **effortless** fastening system makes it easy to position, move or remove accessories. **Modular at will**, EasyClip® adapts to the specific needs of each care situation, whatever the type of pathology.

Easy cleaning (Easy CLEAN)

EASY CLEAN

Thanks to the **EasyClean®** solution, **cleaning** the chair becomes **simple**, **quick** and **effective**. The **removable**, tool-free **chair mattress** gives total access to the surfaces to be cleaned. Result: **integral washing** in a minimum of time, **impeccable hygiene**, and a real gain in comfort for care staff.

Easy maintenance (Interchangeability)

INTER CHANGEABILITY

Our devices have been designed to make everyday life easier for caregivers and technical teams: the **elements**are fully interchangeable without tools, enabling fast, safe and stress-free adjustments.
T h e **motors can be unclipped** without manipulation of the wiring, considerably reducing technical interventions and the risk of error.

This ingenious design enables simplified and rapid **SAV**, with a clear objective: to minimize equipment downtime, guarantee continuity of care and optimize the availability of your equipment.

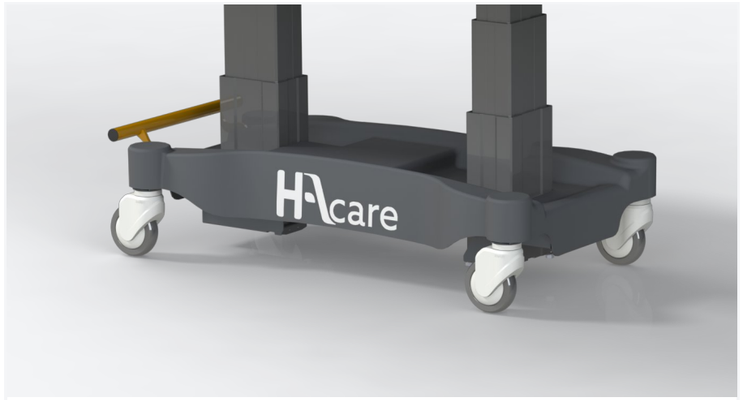
The QR Code to access any information (Traceability)

The **QR Code,** present on each product, gives **access to key information** such as product destination, instructions for use, eco-responsibility, technical data sheets, installation help...

This information is stored on our **SavTech** platform and **accessible** by scanning this QR Code.

CHARACTERISTICS

Mobility

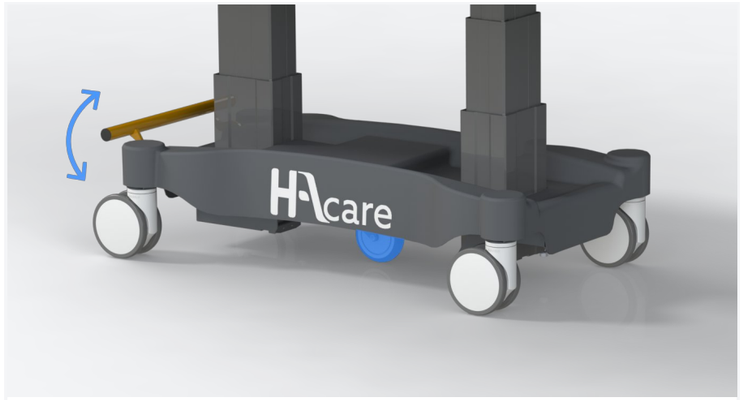


Fluid mobility and assured stability: 125 mm wheels with centralized braking

The chair is equipped with large-diameter wheels (125 mm), designed to offer **optimum mobility** on all types of floor.
Thanks to their size, they enable **fluid movement**, **effortless**, even over long distances or with a patient settled.

To guarantee safety at every stage, the chair is equipped with an **independent (or centralized)** braking system. With a single gesture, the caregiver can immobilize or release all the wheels, ensuring maximum stability during patient set-up, care or transfers.

This device combines **ergonomics**, **safety** and **efficiency**, meeting the demands of dynamic care environments while facilitating the daily life of teams.



Mobility to suit every need: a choice of wheels for intensive use

Because mobility needs vary according to departments and uses, our chair is available with**different wheel configurations**, to ensure optimum maneuverability in all situations.

For facilities where movement is frequent and sometimes over long distances - outpatient departments, hospitals, dialysis centers, we offer **optional 150 mm** diameter wheels, designed to provide **better rolling fluidity**, including on uneven surfaces or during more intensive **branding**.

A fifth central wheel can be added to improve **directional stability** and **facilitate manoeuvrability** in narrow corridors or when turning, thus reducing the effort required of nursing staff.

This choice of configuration allows each facility to customize the level of mobility to suit its field constraints, while ensuring safety, comfort and logistical efficiency.

Fluid, ergonomic driving: effortless guidance, lasting comfort.

To meet the demands of transport in healthcare environments, our chair is equipped with **ergonomic push handles**, specially designed to **facilitate guidance** and reduce caregiver fatigue, even when moving frequently or on difficult floors.

Associated with the Soft Sound system, these handles provide **optimum maneuverability**, ensuring **stable**,**fluid** and **silent** movement, even with a settled patient. Their design takes into account the realities of everyday hospital life: less effort, more control, whatever the conditions.

They offer a **large grip zone**, a natural grip, adapted to all morphologies. This ergonomic design has been thought out to **limit the risk of musculoskeletal disorders** (MSD), preserving the gestures and postures of nursing staff.

Controls

The ergonomic remote control

Comfort position in one step:

This simple operation facilitates the caregiver's work and helps optimize time during the caregiver-patient relationship.

Nursing position in one step:

This control prevents caregivers from bending down during patient care, and effectively combats RSI.

Trendelenburg position in one step

Secure emergency care and patient comfort thanks to **a key to secure** the **trendelenburg function** and direct, simplified access to the Trendelenburg and Trendelenburg positions.

Save time for caregivers, better reactivity on a daily basis.

The ergonomic patient satellite

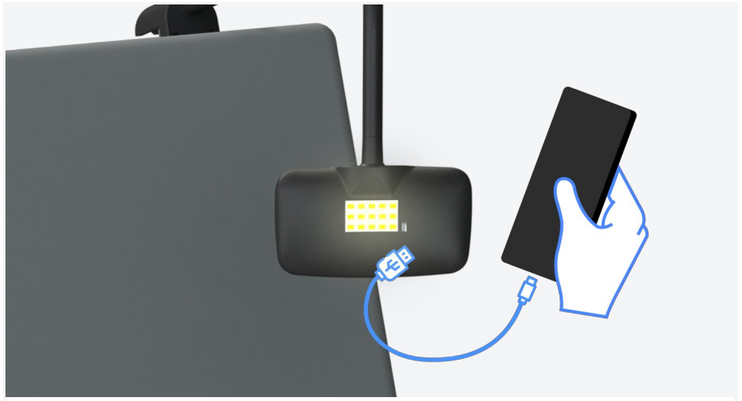
Its ergonomic design enhances the patient's **autonomy**. The latter can easily control the chair's various functions. When not in use, the patient can simply position the satellite on its side.

The control satellite incorporates a **LED lighting** to improve **reading comfort**, even during long care sessions.

It is also equipped with a **USB port**, allowing the patient to easily recharge their phone or leisure devices, completely independently.

To adapt to every dialysis care situation, the satellite can be positioned, without tools, **to the left or right** of the back rest, offering **optimum accessibility** for both patient and caregiver and **adapts** perfectly to **the layout.**

>.



Integrated LED light and USB port for patient comfort

Because patient well-being is about more than just posture, our chair incorporates a **multifunction satellite**, designed to provide **comfort** and **autonomy** during prolonged care.

This module is equipped with a **directional LED lamp**, ideal for providing soft, targeted **lighting**, facilitating reading, writing or simply a moment of relaxation during care.

It allows patients to maintain personal activity without interfering with care or disturbing the care environment.

The satellite also features a **integrated USB port**, allowing easy recharging of phones, tablets or other electronic devices.

A feature designed to **preserve the social link**, keep in touch with loved ones or simply enjoy entertainment content during waiting times.

CHARACTERISTICS

Pre-programmed functions

Nursing

The "Nursing" position is directly accessible**in a single gesture** thanks to the **pre-programmed** care buttons.
Intuitive and fast, this feature makes it easy to set up the ideal posture for daily care. It enables caregivers to intervene at the right height, without having to bend over or multiply manipulations, **reducing** fatigue and the risk of **musculoskeletal disorders.**
For the patient, it's the assurance of **preserved comfort** and smooth **management.**
A solution designed to optimize efficiency, secure gestures and improve the well-being of everyone, at the heart of care.

Patient Welcome

The "Accueil patient" position is specially designed to **secure**a n d **facilitate transfers**. Recommended by occupational therapists: perfectly suited for patient reception with full autonomy or minimal assistance. This position, directly accessible **in a single gesture** thanks to the **pre-programmed buttons**, promotes patient confidence and comfort while simplifying the work of caregivers, who can accompany movements without excessive effort.
A solution that combines **safety**, **ergonomics** and well-being, serving the daily lives of teams and patients.

Ultra-Comfort (Zero Gravity)

With our intuitive control system, the "Ultra-comfort" position, also known as **"Zero gravity"**is directly accessible **in a single gesture** thanks to the pre-programmed **keys.**

T h i s **ergonomic**position has been designed to distribute body pressures evenly over the entire mattress. The pelvis, legs and back are positioned to promote **muscular relaxation**, **relieve joint tension** and stimulate blood circulation, while r**reducing areas of compression.**

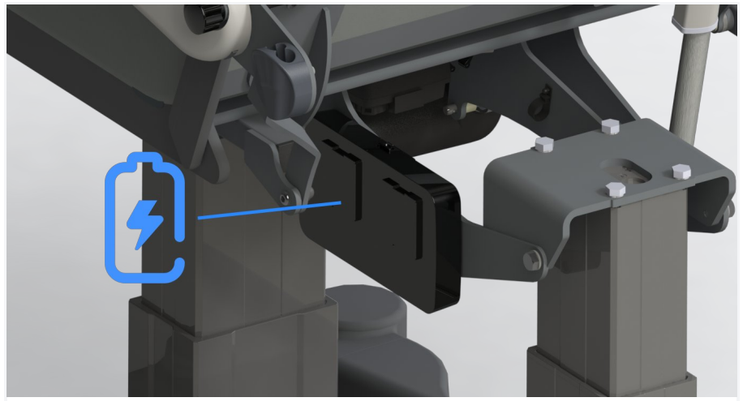
The sensation of well-being is immediate, both for the patient and for those in long-stay or extended care.
This function plays a full part in the **improvement of perceived comfort**, the **prevention of postural pain** and the quality of care.

Emergency declive

The "Emergency Trendelenburg" position can be accessed **in a single gesture** thanks to the pre-programmed **keys.**
This function quickly tilts the patient into the Trendelenburg position, essential in the event of malaise or shock in order to **favor blood return** to vital organs.Designed to maximize the **rapidity of action**, it makes care safer while reducing the stress associated with critical situations.
Ergonomic and intuitive, this control provides care staff with a **reliable** and **immediate** tool, guaranteeing efficiency, safety and operating comfort.

.

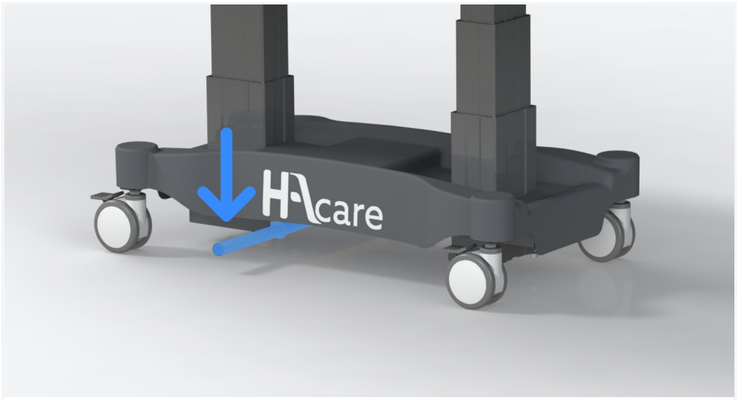
Safety



Integrated battery backup: guaranteed service continuity

To ensure maximum safety and continuity of care, our chair is equipped with a**high-performance battery backup** that automatically takes over in the event of a power failure. This autonomy enables caregivers to **maintain** all the **essential functions** of the chair - position adjustments, back rest, leg rest, variable height - without interruption, even in the event of a power cut.

This solution not only guarantees patient safety and comfort, by preventing any untimely blockages, but also provides **peace of mind** for care teams, by ensuring **fluent** and stress-free management of **emergency situations**. Thanks to this battery, care continues without compromise, whatever the environment or circumstance.

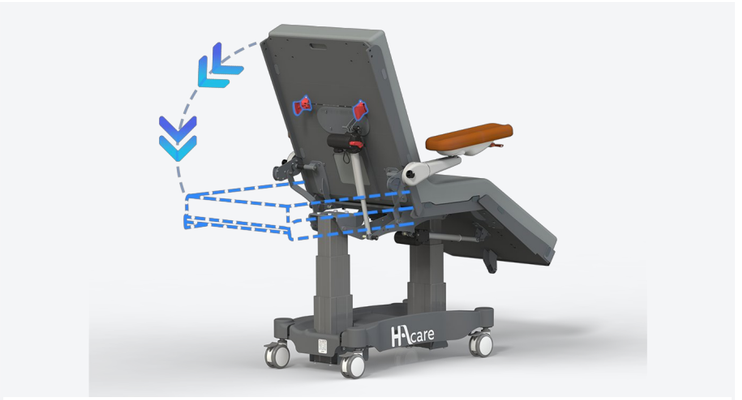


Immediate responsiveness in critical situations

Because some situations require a fast, uncompromising response, our chair can be equipped with an optional **emergency slope-lowering pedal**. Placed within easy reach of the caregiver's foot, this control instantly switches the chair to **the sloping position**, **without manual handling** or loss of time.

This device is particularly useful in the event of vagal discomfort, a drop in blood pressure or a medical incident requiring **immediate reactivity**. It enables rapid restoration of cerebral perfusion, while keeping the hands free to monitor or assist the patient.

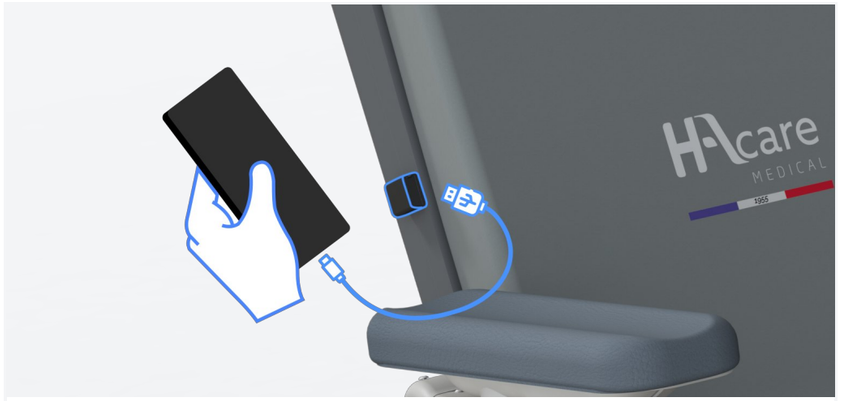
Simple, robust and intuitive, the declive pedal meets the**safety** requirements of acute or prolonged care environments, reinforcing the **rapid intervention capability** of nursing staff.



CPR manual

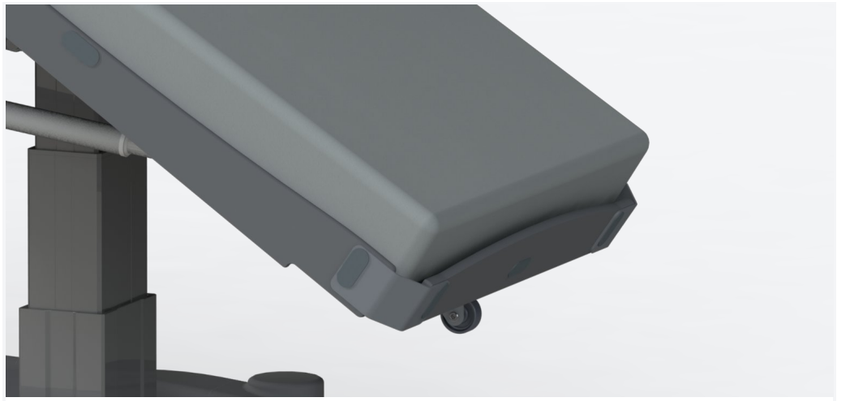
Designed to guarantee safety and responsiveness in all circumstances, the **backrest lift disengagement system** is equipped with **two handles** (bilateral) easily accessible under the lying surface. Intuitively positioned, they enable the caregiver to instantly disengage the actuator to **lower** the backrest lift, or to return it to its fully flat position in **emergency situations**. This ergonomic design reduces complex handling and ensures rapid **intervention**, limiting patient stress and facilitating the work of medical teams. Reliable, simple and secure, this device is an essential asset for **enhancing the quality of care** and the peace of mind of nursing staff.

Lying surface



Integrated USB connection for added convenience

Comfort and autonomy enhanced by the **integrated USB connection**. To enhance**patient well-being** during care, a USB socket is integrated directly into the backrest support. It makes it easy to recharge a smartphone, tablet or other mobile device, without having to leave the chair. This feature promotes **comfort**,**autonomy** and **continuity of the patient's digital habits**.



Reinforced comfort and wrap-around base

Optimized comfort and an easier welcome thanks to **integrated mattress wedges**, designed to enhance the experience of both patient and caregiver, the mattress wedges are directly integrated into the chair structure.

This design ensures excellent lateral support for the patient, reinforces the feeling of **security** during installation and optimizes **comfort** throughout the entire course of care.
At the same time, it **facilitates accommodating gestures** for nursing staff, by limiting manual adjustments.
A solution that is both practical, ergonomic and reassuring.

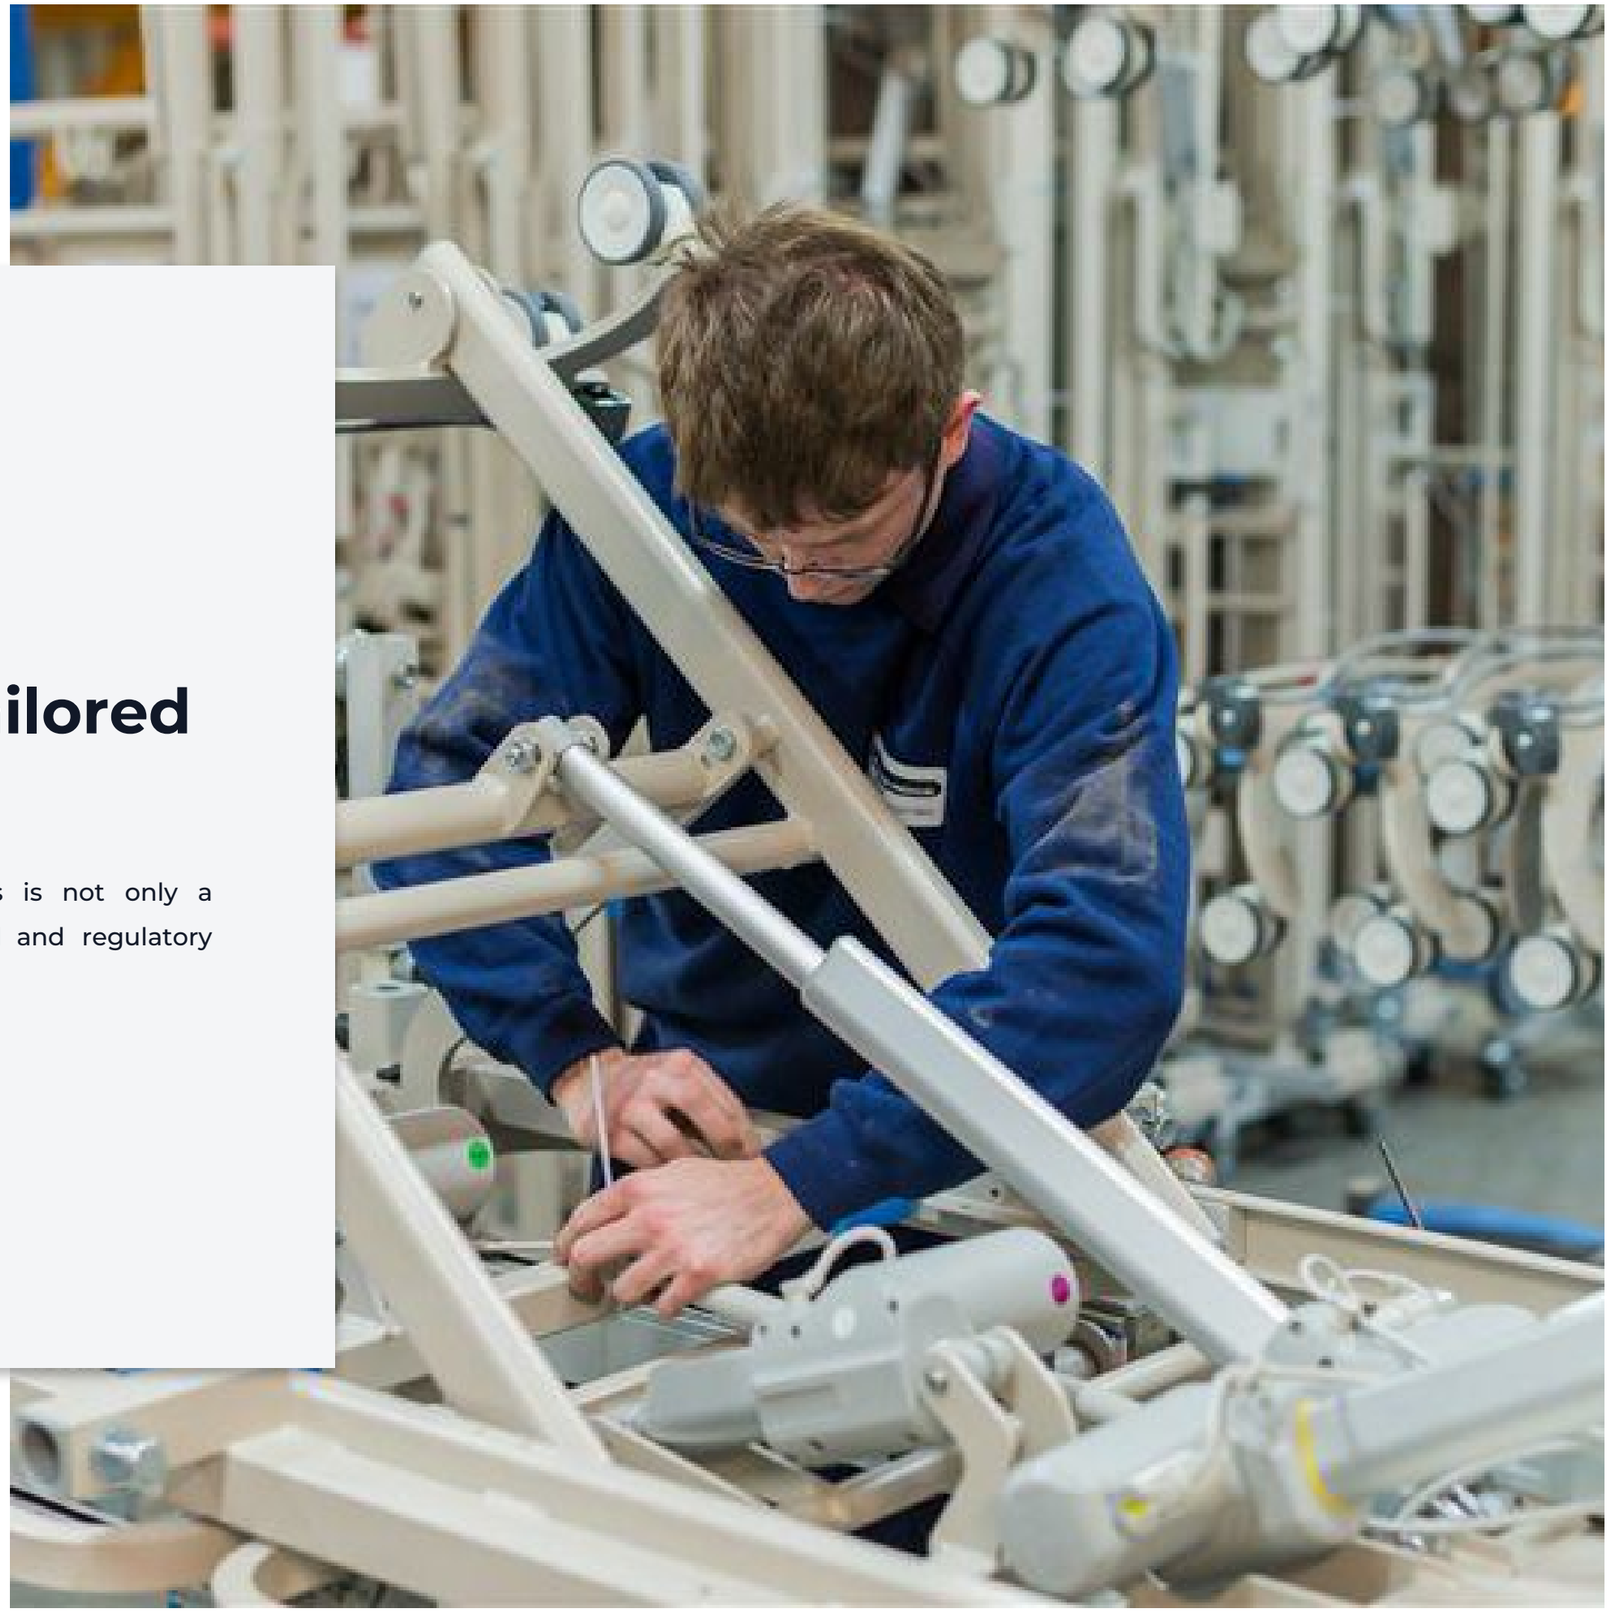
Preventive maintenance tailored to your needs

The maintenance of medical devices is not only a **technical obligation**, but also a **legal** and regulatory responsibility of the organisation.

It is based on:

- A clear policy
- Traceability procedures
- The use of compliant parts
- And staff training



The advantages of preventive maintenance

THE BENEFITS OF REGULAR MAINTENANCE OF YOUR EQUIPMENT

- Improved performance: maximum fleet availability.
- Improved quality: a reliable and continuous service.
- Lower costs: reduced repair costs.
- Fewer breakdowns: continuity guaranteed.

EXTEND THE LIFESPAN OF YOUR EQUIPMENT & ENSURE SAFETY

Our maintenance programmes are designed to:
- Ensure your equipment performs to its full potential.
- Provide regular checks and reliable diagnostics.
- Safeguard the safety of patients, residents and carers.
- Maintain your organisation’s regulatory compliance.

A BUDGET UNDER CONTROL

Our maintenance solutions help you to:
- Plan your expenditure.
- Avoid unexpected costs.
- Optimise your investments with complete transparency.

CERTIFIED COMPONENTS FOR SUSTAINABLE VIABILITY

All our services are carried out using original parts that have been tested and approved, guaranteeing:
- Maximum safety when using your equipment.
- Strict compliance with regulatory standards.
- The durability and reliability of your beds, mattresses and accessories.

Our preventive maintenance services

A SINGLE POINT OF CONTACT FOR A COMPREHENSIVE SOLUTION

From pre-sales to after-sales, we support you every step of the way.

Through a **detailed analysis** of your needs, we provide **tailored technical support**, based on a **long-term** and **effective** partnership.

EXPERTS AT YOUR SIDE

Our technicians and engineers, who receive regular training in the latest innovations, guarantee you:
- A responsive, high-quality service.
- Professional installation of your equipment.
- Comprehensive training for your teams, delivered directly on-site.

OUR TECHNICIANS CARRY OUT A FULL INSPECTION

- Mechanical inspection: assembly, joints, brakes, locking mechanisms.
- Electrical inspection: components, controls, sensors.
- Safety features: barriers, locking systems, protective devices.
- Lubrication: re-greasing of all pivot points.
- Electrical tests: carried out in accordance with current standards.

Each operation (inspection, adjustment, replacement) is recorded in the technician’s maintenance report.

RENOVATION OF THE PARK

Following the visit, our preventive maintenance team will email you the **maintenance report** completed for each piece of equipment.
The **service reports** are sent to your HAcare contact, who will draw up the necessary quotes for repairs or replacements.

This provides you with **comprehensive** and **transparent** tracking of the **maintenance** of your equipment fleet.

The result: a clear and traceable process that guarantees the safety, compliance and availability of your equipment. Translated with DeepL.com (free version)
